

Postgres, MongoDB, and Pandas

5/5 points (100%)

Quiz, 5 questions

✓ Congratulations! You passed![Next Item](#)1 / 1
points

1. This quiz encompasses data and content from Week 1 and 2, so we recommend reviewing that material from last week for this quiz as well. What is the highest level that the team has reached in gameclicks? (Hint: use the MAX operation in postgres).

☒ 8**Correct**☐ 9☐ 6☐ 10☐ 71 / 1
points

2. How many user id's (repeats allowed) have reached the highest level as found in the previous question? (Hint: For postgres: you may either use two queries or use a sub-query).

☒ 51294**Correct**

- ☐ 122757
 - ☐ 98823
 - ☐ 106436
 - ☐ 67271
-

points

4. What does the following line of code do in postgres?

```
SELECT count(userid) FROM (SELECT  
buyclicks.userid, teamLevel, price FROM  
buyclicks JOIN gameclicks on buyclicks.userid =  
gameclicks.userid) temp WHERE price=3 and  
teamLevel=5;
```

- ☒ Finds the total number of user ids (repeats allowed) in buy-clicks that have bought items with prices worth \$3 and was in a team with level 5 at some point in time.

Correct

- ☐ Counts the users who exists between both gameclicks and buyclicks files.
- ☐ Displays the users who have bought items worth \$3 and have had a team with level 5.
- ☐ This is an invalid line of code, the subquery is not formatted properly.
